

User Acceptance Testing Report

User Case Study

The target user is Lokanath Naidugari, a 23-year-old Master's student in Economics at the University of Bonn. Lokanath was chosen for this study because his academic pursuits align with the target audience of MediaSleuth360. He currently uses MediaSleuth360 to analyse video lectures on labour law for his coursework.

User Profile:

- Name: Lokanath Naidugari
- Age: 23
- Occupation: Master's Student in Economics
- Education: University of Bonn
- Current pain points: Manually search for specific information in video lectures and need efficient tools for media analysis.

UAT Plan

Objective:

To evaluate the effectiveness, usability, and user experience of MediaSleuth360 in enhancing media content interaction, specifically in finding specific information in video lectures on labour law by focusing on its core functionalities: media upload, chatbox interface, AI assistance, time stamping, search functionality, and multilingual media analysis.

Test Scenarios:

1. Media Upload and Transcript Generation:

- Users will upload a media file to MediaSleuth360.
- The system will automatically generate a transcript.
- Users can review the transcript for accuracy and completeness.

2. Subtitles Generation and Summarization:

- The system will generate subtitles files, add them to the video, and provide a concise, structured summary with timestamps.
- Users will evaluate the accuracy and usefulness of the subtitles and summary.

3. Interactive Chatbot and Media Navigation:

- Users will use the interactive chatbot to query specific topics within the media file.
- Users can ask the chatbot to search for specific keyword topics within the media, like Unconditional Labour Law from Lokanth's lecture video file.
- Users will assess the chatbot's ability to provide relevant and accurate information based on its content.

4. Multilingual Media Analysis:

- Users will upload a media file in multiple languages (e.g., English, German).
- The system will analyse the media content and provide a summary.
- Users will evaluate the system's ability to handle multilingual media.

Evaluation Criteria:

- **Functionality:** Here, it checks the platform features and abilities.
- **Usability:** User-friendliness of the interface and ease of interaction.
- **Accuracy:** Precision of AI-generated summaries, transcriptions and timestamps.
- **Performance:** Speed and responsiveness of the system.
- **Multilingual Capability:** Effectiveness in handling and identifying multiple languages.
- Users will fill out a questionnaire for better feedback [UAT Questionnaire](#).

Execution and Feedback

Execution:

Lokanath successfully uploaded his labour law lecture recording and interacted with MediaSleuth360. The system generated an accurate transcript, added subtitles, and provided a concise summary. Lokanath found the interactive chatbot to help query specific topics, and the media navigation feature allowed him to find relevant

information quickly. We gave him a questionnaire to fill out regarding his experience with Mediasleuth360.

Feedback:

- Pros:
 - The chatbox interface was user-friendly and provided clear responses.
 - The AI's ability to identify and timestamp specific content was accurate and helpful, particularly for research purposes.
 - The search functionality efficiently pinpointed vital concepts within the media.
 - It gave a neat and concise summary with subtopics in the lecture.
 - It gave me all the implicit mathematical concepts used in the lecture and is also brilliant.
- Cons:
 - The platform occasionally took longer to process complex or multilingual media files.
 - While generally accurate, the multilingual analysis needed to recognise less common languages or accents consistently.
 - The chatbot was great at finding specific topics but sometimes took a few attempts to get the correct answer. It is explained in detail in the questionnaire.
 - It doesn't have a memory of previous chats.
 - It can't look for related information over the internet.

Conclusion

The UAT with Lokanath has confirmed that MediaSleuth360 meets his needs and expectations in enhancing media content interaction. The system's features, such as automatic subtitle generation, summarisation, and chatbot interface, have proven valuable tools for Lokanath when reviewing and organising his lecture recordings. The team will incorporate the feedback to improve the system and provide a better user experience. Overall, the User is satisfied with our Gen AI application.
